an easy to use guide to digital video and moviemaking with tips on equipment and accessories camera and sound techniques lighting and  
editing

preface this story centers on a group of kids their families and the invention of an extremely technical device known as the timedrive this  
multi computer integrated system operates a very unique video camcorder that allows a controlled adjustment of the time variable  
incorporated for playback into a state of the art internally contained spherically domed three dimensional theater it actually replays coverage  
of the space time continuum the system is capable of viewing only the surroundings within range of the zoom lens consider watching a  
movie while sitting in the eye of the camera as everything happens all around you in perfect portrayal of realistic life size examples the only  
catch is that at one time this show was for real consider the sun boasting a core temperature of almost thirty million degrees well over  
ninety million miles away our nearest star spans about three million miles in circumference while containing a spherical volume of nearly a  
million and a half times that of the earth composed of many different gases at extremely explosive pressures we cannot begin to conceive the  
power try to imagine over 100 billion one megaton nuclear bombs exploding every second still while for who knows how many eons this  
massive titanic fireball in space emits heat waves or gamma rays of incomprehensible supply while in the form of electromagnetic energy

they're always present or constant and carry light energy which Einstein called quantum photons the atmosphere focuses this heat energy upon the Earth's surface much like a magnifying glass our resulting weather factor known as the quantum pinpoint depends on the Earth and how its seasonally tilted winter spring etc summertime brings about an intense concentration of focal alignment between atmosphere and surface conditions most people prefer spring and fall as the Earth begins nearing or slipping away from pinpoint focus providing very comfortable conditions factors such as altitude longitude latitude distance from the equator water supplies soil types and many other environmental qualities determine atmospheric reactions in our individual regional global locality the mountains are at a higher altitude never allowing them to fully focus thus explaining the snow covered tops plants and animals need the sun's heat or light energy in order to survive if the human eye could focus on these heat waves in infrared like a cat we would be able to see at night the sun's core energy is released in the form of gamma radiation as unfathomable quantities of gaseous matter interact in the form of nuclear fusion in this process a pair of hydrogen nuclei combined into a single helium nucleus undergo countless other changes and the result radiates throughout the entire solar system the heat energy is absorbed chemically transformed by living organisms then reflected and therefore bounced off the Earth's surface the light photons reflect in your eye as the dark pupil absorbs them in only microseconds a signal is sent to the brain enabling sight think about wearing a black t-shirt on a hot summer day how about the dashboard of your car when left sitting in the afternoon sun the darker objects absorb the light or quantum photons while in a natural conduction transfer of chemical differences in potential energy this is very much like unto the gravity of a mass in comparison to a spherical celestial body in motion however we won't get into that here where do you think the sunlight goes when it's reflected off the Earth's surface it's simply absorbed into space as the cold darkness attracts the light or heat chemical energy Einstein said energy could not be destroyed only changed into another form the universe is made of many strange abnormalities which we don't

from the number one digital photography magazine comes the most comprehensive guide to the fastest selling cameras made today last season's PCPhoto digital SLR handbook gave camera owners a great manual with all the technical guidance they needed now photographers who own an advanced compact digital camera get their turn open up this richly illustrated volume and find in depth instruction with all relevant concepts operations and terms masterfully explained so amateur photographers can take full advantage of these amazingly capable units in addition to a general overview of digital versus traditional photography there's a thorough discussion of how to utilize the LCD monitor built in zoom lens and every feature and function how to edit in camera work the exposure modes get the most from presets and handle the memory card accessories and flash and a full chapter covers picture taking in the field every page is inspirational and invaluable
