from an award winning writer and linguist a scientific and personal meditation on the phenomenon of language loss and the possibility of renewal as a child julie sedivy left czechoslovakia for canada and english soon took over her life by early adulthood she spoke czech rarely and badly and when her father died unexpectedly she lost not

only a beloved parent but also her firmest point of connection to her native language as Sedivy realized more is at stake here than the loss of language there is also the loss of identity language is an important part of adaptation to a new culture and immigrants everywhere face pressure to assimilate recognizing this tension Sedivy set out to understand the science of language loss and the potential for renewal in memory speaks she takes on the psychological and social world of multilingualism exploring the human brain's capacity to learn—and forget—languages at various stages of life but while studies of multilingual experience provide resources for the teaching and preservation of languages Sedivy finds that the challenges facing multilingual people are largely political countering the widespread view that linguistic pluralism splinters loyalties and communities Sedivy argues that the struggle to remain connected to an ancestral language and culture is a site of common ground as people from all backgrounds can recognize the crucial role of language in forming a sense of self distinctive and timely memory speaks combines a rich body of psychological research with a moving story at once personal and universally resonant as citizens debate the merits of bilingual education as the world's less dominant languages are driven to extinction and as many people confront the pain of language loss this is badly needed wisdom

this is a comprehensive description of a language spoken some 450 km offshore from the mainland of Papua New Guinea the language is remarkable for its phonological morphological and syntactic complexity as the sole surviving member of its language family and with little historical contact with surrounding languages the language provides evidence of the kind of languages spoken in this part of the world before the Austronesian expansion the grammar provides detailed information on the phoneme inventory morphology syntax and select semantic fields remarkable features include a 90 phoneme inventory including unique sounds a morphology with thousands of non-compositional portmanteau elements complex rules for negation and extensive ergative syntax unusual patterns are also found in the organization of semantic fields for example in paronymies of the body taxonomies of the natural world verbal semantics and kinship terms the combination of linguistic rara suggest that linguistic evolution under low contact can yield baroque and unusual patterns the volume should be of special interest to linguists typologists sociolinguists anthropologists and researchers in Oceania and Melanesia endorsement this long awaited grammar is a major contribution to Papuan and general linguistics providing as it does by far the most comprehensive and accurate grammatical description of a language that has already assumed a position as one of the world's most complicated hitherto the most extensive grammatical description of

the language has been the survey like henderson 1995 and while levinson explicitly acknowledges his debt to this earlier grammar and to unpublished work by henderson his own detailed grammar clearly takes the level of description and analysis of the language to a completely new level in particular levinson s grammar makes clear precisely to what extent and in what ways the language s morphology is complex beyond even what most studies on morphologically complex languages envisage in addition it provides a much more detailed account of the language s syntax based on a judicious combination of corpus attestation and careful elicitation incl using the kits developed by levinson s group at the mpi for psycholinguistics the grammar thus not only fills a major lacuna in our knowledge of the non austronesian languages of the new guinea area but also provides grist for future studies on the implications of the language s complexities bernard comrie university of california santa barbara

drawings and sequential images are an integral part of human expression dating back at least as far as cave paintings and in contemporary society appear most prominently in comics despite this fundamental part of human identity little work has explored the comprehension and cognitive underpinnings of visual narratives until now this work presents a provocative theory that drawings and sequential images are structured the same as language building on contemporary theories from linguistics and cognitive psychology it argues that comics are written in a visual language of sequential images that combines with text like spoken and signed languages visual narratives use a lexicon of systematic patterns stored in memory strategies for combining these patterns into meaningful units and a hierarchic grammar governing the combination of sequential images into coherent expressions filled with examples and illustrations this book details each of these levels of structure explains how cross cultural differences arise in diverse visual languages of the world and describes what the newest neuroscience research reveals about the brain s comprehension of visual narratives from this emerges the foundation for a new line of research within the linguistic and cognitive sciences raising intriguing questions about the connections between language and the diversity of humans expressive behaviours in the mind and brain
